WHAT IT IS?

The SparkFun Soil Moisture Sensor measures the volumetric water content in soil.

It helps determine how wet or dry the soil is, making it useful for automated plant watering systems, greenhouse monitoring, and IoT agriculture projects.

It works as a variable resistor: the resistance changes depending on soil moisture.

WEATHERPROOFING AND

PRINT SOIL MOISTURE DATA IN THE SERIAL MONITOR

CODE

Download code

https://github.com/camilacolussi/Soil_Moisture.git

INSTRUCTIONS

Assemble the sensor and Arduino as shown in the picture.

Upload the code to your Arduino Board, and open the Serial Monitor. What data do you see printed?

CHALLENGE:

1. Modify your code and add an LED to monitor moisture after an specific threshold.
2. Upload a video (aprox 10 seconds) showing your achievements.
